ALIGNMENTS

The invention relates to a method for growing marine fish in fresh water. The method involves: adding at least one polyvalent cation sensing receptor (PVCR) modulator to fresh water to modulate or maintain expression and/or sensitivity of at least one PVCR in atleast one tissue; transferring the marine fish to the fresh water, modified according to the previous step; and adding feed containing Nacl to contribute to a significant increased level of the PVCR modulator in serum of the marine fish. The invention is useful for growing marine fish in freshwater e.g. mackerel, pollock, sea base, sword fish, tuna, winter flounder and summer flounder. The marine fish cultured by the method have stronger immune Growing marine fish in fresh water involves adding polyvalent cation receptor modulator and feed containing sodium chloride. in water; polyvalent cation sensing receptor; PVCR; fat content; receptor; ds. C functions and are less susceptible to parasitic, bacterial, viral and CC fungal diseases and thus are much healthier. The marine fish are economically produced and have a higher fat content and a milder, less CC fishy taste. The present sequence is SKCaR DNA used to illustrate the CC method of the invention XX SQ Sequence 4134 BP; 1028 A; 1164 C; 1019 G; 923 T; 0 U; 0 Other; Query Match Best Local Similarity 100.0%; Score 4134; DB 6; Length 4134; Best Local Similarity 00.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes an isolated nucleic acid sequence (I) encoding a polyvalent cation-sensing receptor protein (PVCR), especially Shark fidney calcium receptor related protein—I (SKCAR-RP-I) that allows fish to sense ion concentrations. The aquatic PVCR allows the successful adaptation of fish, such as flounder, to marine and fresh water environments, and controls maturation and developmental stages in marine species. Modulating the expression of PVCR activates or inhibits PVCR mediated ion transport and endocrine changes that permit fish to adapt to fresh or salt water. Activating PVCR in epithelial cells increases or decreases salinity tolerance in aquatic species. Regulating salinity tolerance is useful to develop new species of marine fish that are easily adaptable to fresh water aqua culture. The methods are useful for adaptable to fresh water adua culture. The methods are useful for altering body composition e.g. fat content, protein content, weight, thickness, moisture and taste. The species can be maintained in both environments, onsecutively to reduce parasites, bacteria and contentian (Updated on 07-NUG-2003 to correct OS field.)

The present invention describes a method for improving the raising of pre-adult anadromous fish maintained in fresh water prior to transfer to seawater. The method involves: (a) adding at least one polyvatent cation sensing receptor (PVCR) modulator to the fresh water; and (b) adding a feed containing an agent that increases the level of PVCR modulator in the serum of fish. The PVCR modulator has anabolic activity. The method can be used for improving the raising of pre-adult anadromous fish e.g. salmon, char and trout, maintained in fresh water prior to transfer to seawater. The present sequence encodes doglish shark kidney cation receptor (SKCaR), which is relative to the PVCRs from salmon, char and Improving the raising of pre-adult anadromous fish e.g. salmon involves adding polyvalent cation sensing receptor modulator and a feed containing an agent that increases level of modulator in serum of fish. The invention comprises the amino acid and coding sequences of poly cation sensing receptor (PVCR) proteins from Atlantic salmon. The D protein sequences of the invention are useful in the commercial rai of Atlantic salmon and the restoration of wild Atlantic salmon populations, especially in the transfer from freshwater to seawater increased growth and reduced mortality. The present DNA sequence en a shark PVCR-related protein. Sequence 4134 BP; 1028 A; 1164 C; 1019 G; 923 T; 0 U; 0 Other; uery Match Local Similarity 100.0%; Score 4134; DB 10; Length 4134; est Local Similarity 100.0%; Pred No. 0; or Thals 0. Garanthes 4134; Conservarive 0.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to aquatic polyvalent cation-sensing receptor (PVCR) proteins and methods of regulating PVCR functions in aquatic species. PVCR is used to screen candidate compounds that may be used to assist fish in adapting to changing ion concentrations by altering water intake, water absorption or urine output and/or for modulating the percentage of total fat, protein and moisture of muscle of the fish. The present sequence is dogfish shark kidney calcium receptor related protein method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180

```
The present invention relates to methods for improving the raising of pre-adult anadromous fish or preparaing these fish for transfer to seawater by modulating expression of a receptor referred to as the Polyvalent Cation Sensing Receptor (PVCR). The invention is useful in increasing survival and growth and reduce stress of the fish that have been transferred to seawater. The present sequence is a dogfish shark cation receptor (SKCaR) DNA.
                                                                                                                                                                             Growing pre-adult anadromous fish in freshwater comprises adding feed containing an amount of NaCl for fish consumption to the freshwater to increase the level of the Polyvalent Cation Sensing Receptor modulator serum of the fish.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GACATCATACTGGGAGGTCTCTTCCCAATACACTTTGGAGTAGCCGCCAAGGATCAGGAC

Hebert S; Brown E, Harris HW,

WPI; 1997-489640/45. P-PSDB; AAW32059.

New isolated Aquatic polyvalent cation-sensing receptor - used to develop products for increasing or decreasing the salinity tolerance of fish for use in aquaculture.

Claim 2; Fig 4A-F; 57pp; English.

This cDNA clone codes for dogfish shark kidney calcium receptor related protein (SXCaR-RP, see AAW32059), an aquatic polyvalent cation-sensing receptor (PVCR). It was isolated from a shark kidney colvant library using a rat kidney calcium receptor CDNA as probe. Also claimed are: a probe comprising the 4131 bp SKCaR-RP sequence; an isolated PVCR present in the plasma membranes of aquatic species, especially on the apical membrane of epithelial cells of elasmobranch fish, particularly from cells found in the collecting duct or late distal tubule in the kidney, intestine, gill, rectal gland, gonad or brain; an antibody that specifically binds to a PVCR; and a method of screening for aquatic PVCR activates or inhibits aquatic PVCR mediated ion transport and endocrine changes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g &
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to G-protein fusion receptors (I) comprising: (1) in the N to C direction, extracellular (ECD), transmembrane (TMD) and intracellular (ICD) domains, each choice in the N to C direction, each choice in Gepencially from a CaR calcium receptor), GluR (derabotropic glutamate receptor) and GABABR (admin-aminobutyric acid receptor); (2) an optional linker attached to the C-terminus of ICD; and (3) a G-protein (GP) linked to ICD or the Clinker. (I), and recombinant chimeric receptors (RR) without the GP component, are used to assess function of the various domains and to identify compounds (e.g. allosteric modulators or antagonists) that act or identify compounds (e.g. allosteric modulators, e.g. stroke, head or preventing diseases associated with the receptors, e.g. stroke, head or spinal cord injury, epilepsy, ischaemia, hypoglycaemia, anoxia, allows associated with the receptors, e.g. stroke, head or spinal cord injury, epilepsy, ischaemia, hypoglycaemia, anoxia, allowers and depression. Nucleic acid (II) that encodes (I) is used: (I) for recombinant production of corresponding proteins; and (2) to produce cells used in screening for modulators. Use of CaR and mGluR domains cells used in screening for modulators. Use of CaR and mGluR domains allows presentation of GABABR domains, to a binding agent, in a form more like the natural domain structure compared with use of incomplete receptors, lacking one or more domains. By shuffling different domains, ceeptors, lacking one to more domains. By shuffling different domains, ceeptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       260

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   770
                                                                    The present sequence is the human calcium receptor nucleic acid sequence. This is used in assaying for compounds modulating GABABR activity. GABAB receptors are metabotropic receptors that modulate synaptic transmission in brain. Portions of calcium receptor are swapped with portions of GABABR2 to create protein fusions. The agonist extracellular binding domain is swapped for measurement of antagonist activity. Intracellular domains are swapped for measurement of antagonist activity intracellular different receptor.
                                                                                                                                                                                                                                                                                                                                                     170
                                                                                                                                                                                                                                                                                                                                                                                                                                                            290

The invention comprises G-protein fusion receptors - comprising extracellular, transmembrane and intracellular domains similar to CaR, mGluR or GABAB receptor sequences. The G-protein fusion receptors of the invention may also possess a linker joined to the carboxy terminus of the intracellular domain, and a G-protein joined to the linker. The G-protein fusion receptors of the invention are useful for identifying modulators of GaR, mGluR and GABABR for use in treating associated conditions. The present cDNA sequence was used in the production of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 crirccrarrcarringgagragcagcraaagarcaagarcrcaaarcaaggccggagrc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ATTTGACACGTGTACCAGGCCCTAGGCCCTAGAGGCAACACTCAGCTTTGTGGCCCCA

The invention relates to human and mouse G protein-coupled receptors of GPCRs) and nucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids of the invention; methods of treating, preventing or diagnosing diseases associated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic mouse comprising a GPCR gene of the invention; a mouse comprising a GPCR gene of the invention; a mouse comprising a GPCR transgene or in an endogenous GPCR gene; cells derived from the trasngenic mice; kits comprising several mice, each of which has a mutation in a different GPCR polynucleotides of the invention. The invention iturther discloses variants of the GPCR polysphides and vectors comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may be used in the diagnosis, treatment or prevention of a wide variety of discression, diabetic neuropathy, disorders (e.g., Alzhainer's disease, disorders of the adrenal gland; disorders (e.g., Alzhainer's disease, disorders of the adrenal gland; disorders (e.g., Alzhainer's disease, distrathoea, food poisoning or irritable bowel syndrome); cardiovascular disorders (e.g., augina, cardiac arrhythmia or mycocardial infarction); muscular disorders (e.g., auctions or intestine consensation relaxemia); immune disorders (e.g., auctions); cardiovascular disorders (e.g., auctions); cardiovascular disorders (e.g., auctions); cardioters (e.g., auctions); and disorders of the kidney, liver, lung, breast, ovary, uterus, prostate, testis, skin, stonach, pancreas, spleen, thymus and thyroid (e.g., cancers). The present sequence represents a GPCR encoding context disorders of the kidney, liver, lung, breast, ovary, check the invention. Note: The full sequence data for this context belown were obtained in the commence of the prince descent directly from WIPO at the laws of the propertical directly from sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GAATGAGTACAAGGCCTTCCTGAGGACCATCCCCAATGATGAGGAACAGGCCACGGCCAT 1040

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABB83619) of 12-24 amino acides. Also described: (1) am assay for the detection of a particular GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in antibodies. The peptides for GPCRs are useful in detecting an antibodies. The peptides for GPCRs are useful in detecting an antibodies. The peptides for antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related diseases, cell cregeneration-related diseases, immunological-related cell proliferative diseases, or autoimmune diseases, immunological-ralated cell proliferative atherosclerosis, bacterial, fungal, protezoan or viral infections.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      8 6
                                                                                                                                                                                                                                                                                                                           The present invention relates to a microarray comprising a matrix of at least one cDNA probe from a set of probes immobilised to a solid surface in a predetermined order, where a row of pixels corresponds to replicates of one distinct probe from the set. The probes are complementary to muchelic acid sequences that are expressed differentially in aggressive as compared to non-aggressive types of clear call renal carcinoma (CC.RCC) and that hybridise to the probes under high stringency conditions. The microarray is useful for the prognosis of patients with CC.RCC, wherein aggressive and non-aggressive CC-RCC tumour types are characterised by differential expression profiles of genes that hybridise with one or more probes immobilised on the microarray. The arrays are useful for gene expression profiling of tumour and normal tissues. The present sequence represents a human CDNA sequence down-regulated in CC-RCC patients
                                                                                                                                                                                                                                                     New microarray, comprising a matrix of cDNA probe from a set of probes immobilized to a solid surface in predetermined order, useful in the prognosis of patients with clear cell renal carcinoma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2901
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2961
```

using pBopCaR1 as a hybridisation probe. mRNA was isolated from a 39 year clones of approx. 5 and 4 kb were identified. These oblnA's were injected inco Xenopus ocytes which were assayed for the presence of functional calcium receptors as assessed by the stimulation of calcium-activated chloride currents upon addition of appropriate calcium receptor agonists. WPS currents upon addition of appropriate calcium receptor agonists, of the existence of at least two sequence variants differing in the 3' untranslated region and which may result from alternative upoxyadenylation. Sequence analysis of the two cDNA clones indicated untranslated region and which may result from alternative transcription initiation and/or splicing. Three additional sites of transcription initiation and/or splicing. Three additional sites of sequence variation occur within the coding regions of cDNA clones phuepcaR5.2 and phuepcaR6.0 splicing. Three additional substance analysis of the human can gene indicates that the additional 30 bp in clone phuepcaR5.2 as compared to phuepcaR4.0, results insert 10 additional amino acids into the CaR protein encoded by thuepcaR5.2 between residues 536 and 537 of the protein encoded by thuepcaR5.2 between residues 536 and 537 of the protein encoded by thuepcaR5.2 between residues 536 and 537 of the protein encoded by thuepcaR5.2 between residues 536 and 537 of the protein encoded by thuepcaR5.2 between residues 536 and 537 of the protein encoded by the positions. These two receptor isoforms may be functionally and/or these positions. These two receptor isoforms may be functionally and the manacologically distinct

The Human parathyroid calcium receptor gene encodes a 1078 amino acid protein. The tissue from which the receptor and receptors from bovine parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration, e.g. parathyroid hormone regulates alters through changes in Ca2+ homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ hose in Ca2+ homeostasis in Ca2+ hose in ca2+ hose in the kidney. The purified receptors (produced recombinantly) can be used to screen for compounds that modulate calcium recombinantly, especially those that can be used to treat diseases associated with the receptors in these tissues. They can also be used to raise an tibodies for use in detection assays
